

Army Data and Analytics Platforms (ARDAP)

**Information Readiness. Data Agility.
Mission Success.**

WHAT IS ARDAP?

INNOVATIVE DATA OPERATIONS FOR DECISION MAKERS

ARDAP is a portfolio of systems that will modernize Army business processes and enable scalable, agile, and trusted data platforms integrated with data services/applications, visualization, and analytic tools to facilitate fact based and resource-informed decision-making.

WHAT DOES ARDAP DO?

- **DATA BROKER**
ARDAP collects, catalogues, integrates, analyzes and visualizes data from disparate source systems to support data sharing across the Army and with its partners.
- **DATA MANAGEMENT AS A SERVICE (PLATFORM PROVIDER)**
ARDAP provides expertise and technology to make data Visible, Accessible, Understandable, Linked, Trusted, Interoperable, Secure (VAULTIS) for Army organizations.
- **ANALYTICS AS A SERVICE (FULL SERVICE)**
ARDAP provides end-to-end solutions for data integration to analytic and visualization products.

WHO WE ARE

The Army seeks to continually improve its **INFORMATION READINESS** and **DATA AGILITY** to gain decision advantage. ARDAP contributes to this goal by providing modern data and decision support tools and platforms, harnessing data across defense business systems and modernizing the Army's training management system.

MISSION

To *accelerate Army leader informed decisions* and Warfighter mission accomplishment by ensuring near real-time availability of command and logistics information and data.

FAST FACTS

Provides data and analytics to nearly **20** customer and stakeholder organizations

Supports more than **2 million** Soldier, civilian and contractor users

Supports key tenets of the Army's overall **Data Strategy** to innovate data operations and increase agility

TOP GOALS & PRIORITIES

Why we do what we do, every day

ARDAP will develop, test, and field:

- An Army data platform to collect, catalogue, integrate, analyze, and visualize data from disparate source systems
- Visualization and analytical tools for improved, data-informed decision making, including machine learning services and artificial intelligence
- A centralized method for authoritative Army enterprise master data management
- A platform for operations research/systems analysis and functional-specific experts to develop, validate, publish, and leverage Army data models for Soldiers
