Product Manager Army Training Information Systems

Achieve and Maintain Readiness.

U.S. ARMY

ATIS MISSION

Product Manager Army Training Information System will develop,

integrate, test, deliver, operate, and maintain an enterprise

A SOLDIER'S SOLUTION

capability for the Army training and education communities.

- **Modern Systems Meeting User Expectations:** ATIS will deliver

  one modern user interface sharing common design standards

  across capabilities for a singular user experience.

- **Tools for Individuals at Echelon:** Role based access controls

ENABLING READINESS

provide users with access to the data and applications they need,

- **Improved Reporting and Visibility**: ATIS allows leaders and
  organizations to see every aspect of training information in one
  from individual training to unit reports.
  place with greater fidelity and accuracy than ever before.

- **More Time for Training:** Less time managing data equals more

- time training. From the individual through the division, creating
  Intuitive and Efficient: User centered design reduces the use of
  managing and viewing data will be more efficient.

- **Training Management**: With all data and capabilities in one suite
  unofficial workarounds created by users to overcome the
  of applications, unit training management is easier than ever.
  ATIS provides the ability to see all aspects of training in one
  location, from scheduling facilities and coordinating resources
  challenges of using today's disparate systems.
  through evaluating and certifying unit readiness.

FAST FACTS

One system will replace 28 legacy training systems.

Agile Software development enables the continuous delivery of new capabilities, providing users with new tools as soon as possible.

The web-based system will be the authoritative source for Army training data.
